Web catalogue

NTP is the result of many years of development in close cooperation with several leading producers of undercarriage parts. We have carefully chosen partners where quality, flexibility, and short lead-time are important parameters. As a result, we have been able to launch over 3.000 new product in the last years. NTP cover products for any machine brand and for any kind of application like mini-excavator, excavator, tractor, dozer, loader, drilling, paving, milling and special crawled machines currently up to machine size/ weight about 90 Tons. In this folder, a sample of the products under the brand NTP are presented.

Vulcanized NTP rubber or polyurethane track shoes for any kind of paver and milling machine application.

Sprockets are available as welding rim and bolt-on for excavator and bolted segment for bulldozers. The sprocket surface is heat treated in one shot in order to get the same hardness in continuity in every tooth.

Track and carrier rollers for excavators, mini-excavators, and bulldozers are engineered for heavy duty applications. Rollers are assembled with duo cone casted seals at high hardness and oil filled.

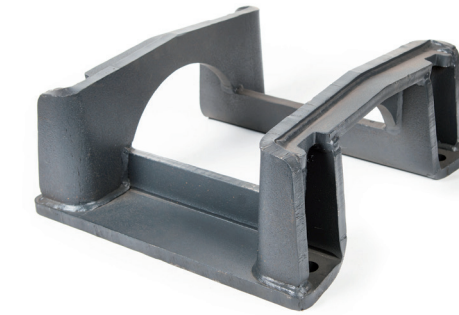

Dry track chains for excavators, mini-excavators have been specially developed for the hard Scandinavian conditions. Oil-lubricated tractor chains are available for most common machine brands. The wide range of chains covers applications from 0.5 tons to 90 tons.

Idlers for excavators, mini-excavators, dozer and special machines are produced to guarantee the maximum performance in heavy duty condition. Idlers are filled with oil.

Repair links and spare parts for track chains.

Rockguards for many machines

NTP undercarriage components are available for wide range of Compact Track Loader (CTL) machines.

Spring and tension group designed to guarantee your undercarriage the right tension. More than 200 different configurations suitable for many machine models.

Track shoes in various types and thicknesses.

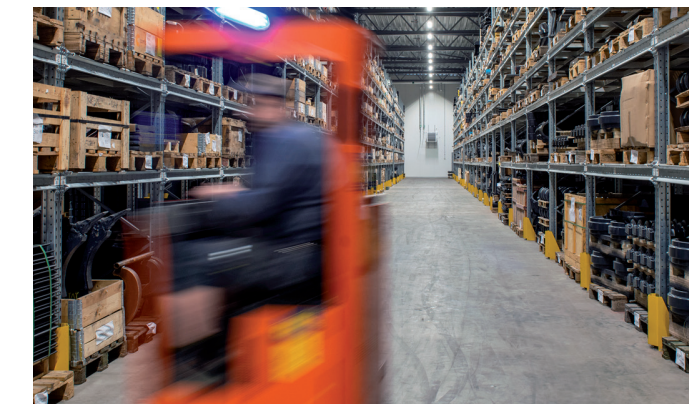

NTP rubber tracks are available, both as standard and anti-vibration AVT, for machines up to 7-8 tons for all brands, larger ones can be produced on request. The tracks are produced with continuous steel core and with high quality rubber compound to achieve a strong and reliable product.

NTP rubber pads are available in three different versions: Chain-on which is replacing the steel shoe and bolted directly on the chain, Clip-on is attached with clips to the existing shoe, and Bolt-on which is bolted through pre-drilled holes in the steel shoe.

One of the widest ranges and largest stocks of undercarriage products in Europe.

Staff with high knowledge and experience from the business.
